April 20, 2017

Dear Members of the Pease Tradeport Community Advisory Panel:

Today you will receive a short summary of the types of health outcomes we think are feasible to study with the population identified in Pease. We have also included additional information about what *might* be possible to study with additional participants found outside of Pease but with the same type of exposures, and things that we feel *will not* be possible to study. This shortened version will be followed by a longer, more comprehensive analysis as soon possible.

I extend my deepest apologies for the length of time it took ATSDR to deliver this document to the CAP, and I feel confident that the feasibility assessment will guide decision making going forward. We collaborated with some of the brightest minds to make sure our report was clear and scientifically accurate.

I look forward to discussing this and other issues with you during the next CAP meeting, which will be rescheduled shortly. Please look for communications from ATSDR as we work to select a date and time for the meeting.

Sincerely,

A handwritten signature in blue ink, reading "Patrick N. Breyse". The signature is written in a cursive, flowing style.

Patrick N. Breyse, PhD, CIH
Director, ATSDR
